   c) AI Readiness – 45 minutes, Discussion
      1. Cyera Data Security Demo for NOCCCD – 45 minutes, Discussion
   d) Microsoft Phasing out SMS and Voice for MFA – 15 minutes, Discussion
      1. Support Plan
   e) Network Optimization Project Update – 5 minutes, Informational
6. NEW BUSINESS
   a) None
7. ADJOURNMENT

BP3720 & AP3720 first-read feedback:

Two areas generated particularly substantial discussion:

- **Section 3.1, encryption and confidential information:** Members discussed whether language stating that devices without encryption "will not" be used for confidential district information was workable, particularly where employees or faculty use personal devices. Discussion addressed district-issued versus personally owned devices, PII, encryption, remote access, cybersecurity risk, insurance, legal guidance, and the need for clear implementation expectations.

- **Section 5.1.15.1, third-party applications and services:** Members raised concerns about requiring approval for applications, software, vendor services, or systems outside District Information Services. Discussion focused on academic freedom, instructional applications, Canvas integrations, SaaS products, security review, accessibility requirements, data handling, and identifying who should have authority to approve instructional technology.
- **Section 6.3, restricting access:** Members were concerned about the district's ability to restrict access from non-district devices. The discussion clarified that the provision was intended to protect district resources when personal devices or their use could create security concerns.

Next Meeting: December 15, 2026 (IF NEEDED)
