I. Chancellor’s Message

Chancellor’s Message

In 2011, the North Orange County Community College District (NOCCCD) published its Comprehensive Master Plan, a document with the stated purpose of providing “big picture guidelines for planning and decision-making throughout the District for the next ten years.” The master planning process was key in developing the District-wide Strategic Directions, which, in turn, inform all other planning for the campuses and District Services.

At the time, we noted that the Master Plan’s “precepts are designed to be agile, useful, and elastic, resulting in a living document that will continue to be explored and re-imagined as the demands and challenges of the years arise.” After the passage of NOCCCD’s $574 million Measure J facilities bond measure in 2014, it became clear that in order to maximize the voter’s investment into our campuses, we would need to revisit not only our original facilities projects lists, but also the educational and demographic information that helped develop them.

This Mid-Term Master Plan Review does just that. The purpose of the Review is multifold: to provide a current perspective for future space requirements specifically in instructional and support services facilities using Fall 2014 data; to provide a quantitative analysis of the current condition of each campus based on capacity for accommodating growth; and to provide the teaching and learning technology necessary for programmatic and student success. In addition, the Review addresses the unique branding and spatial circumstances of the Anaheim Campus, which is both the main learning facility for the School of Continuing Education students and the headquarters for District Services.

While not as comprehensive in nature as the 2011 Master Plan, this update should be used to influence short-term decisions concerning the beginning of the Measure J building program, as well as serve as a beginning point for the next master planning process. I’d like to thank Cambridge West Partners, Dr. Cherry Li-Bugg, and all of the District and campus staff whose months of effort are reflected in these pages. I am confident that this information will allow us to better serve our students for decades to come.

Fred Williams, Interim Chancellor
